## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 18 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese reference no. 7-11637 alone. Japanese reference '637 discloses a winged pile and associated method. It would be inherent that upon reaching "hard" ground or where the penetration is decreased that the pile be withdrawn and then repeat rotation so as to commence and facilitate penetration into the ground. It would also have been obvious to one of ordinary skill in the art at the time the invention was made to withdraw or reverse direction of a pile member when penetration is decrease, since it is well known to withdraw or reverse a screw pile/drill to allow for "re-drilling" and doing so would facilitate penetration into the ground.

### ***Response to Arguments***

3. Applicant's arguments filed 2/17/04 have been fully considered but they are not persuasive. It is believed that it would be obvious to one of ordinary skill in the art at the time the invention was made to withdraw or reverse the screwed steel pile upon a decrease of penetration and then to continue rotation of the screwed steel pile until a desired depth was reached. In drilling or rotating of a pile into the earth, it would be plausible that hard or harder ground or material or even an obstruction would be

encountered. Upon such encounter, it would be possible for the operator to withdraw the pile and take factors such as ground resistance or obstructions into account, and then to commence drilling or rotation of the pile member to overcome such encounter.

***Conclusion***

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
